

CARACTERÍSTICAS GENERALES:

- Diseñado según EN50155
- Fuego y humo: Aprobado EN45545-2
- Alto aislamiento entrada-salida
- Dimensiones estándar Eurocard 3U
- Tensión de salida ajustable
- LED tensión de entrada correcta
- LED presencia de tensión de salida
- Inhibición remota.
- Opción: detección remota o alarma

GENERAL FEATURES:

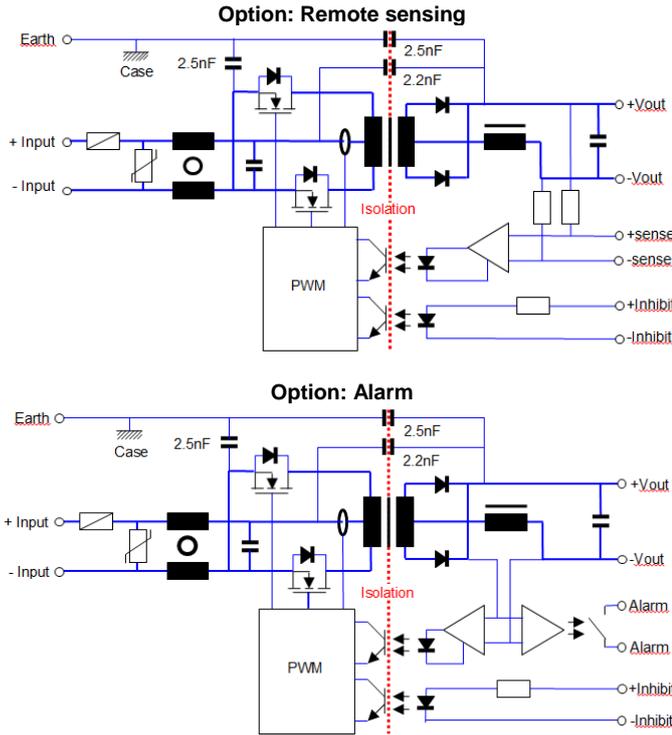

- Designed according to EN50155
- Fire and smoke: EN45545-2 approved
- High input-output isolation
- Standard size Eurocard 3U
- Adjustable output voltage
- Input voltage OK LED
- Output voltage presence LED
- Remote inhibit
- Option: remote sensing or alarm

CONECTOR / CONNECTOR DIN 41612 H15 - Max. 12A / Terminal

REGLETA DE FASTON / FASTON 1/4" - Max. 18A / Terminal

TERMINAL DE CLIP / CLIP TERMINAL - Max. 12A / Terminal

DESCRIPCIÓN

La serie CTS-240 está constituida por convertidores de corriente continua a corriente continua con aislamiento galvánico entre la entrada y la salida, conmutando a frecuencia fija y empleando la topología de convertidor en contrafase.

Hay dos opciones a elegir:

- 1 - Con detección remota
- 2 - Con alarma de tensión de salida baja

Para disponer de la máxima regulación, pueden conectarse a la carga los terminales de detección remota. Esto permite compensar una caída en los cables de potencia hasta 0,3V en cada uno de ellos.

El aparato está protegido contra sobrecargas y cortocircuitos por un circuito limitador de corriente.

También está preparado para soportar una inversión de polaridad de tensión a la entrada, fundiendo el fusible de entrada en caso de conexión errónea.

En caso de subtensión en la entrada el convertidor se inhibe evitando la descarga total de la batería.

DESCRIPTION

The CTS-240 series consists of PWM DC-DC converters, with a galvanic isolation between input and output. The converters operate at a fixed switching frequency and use push-pull converter topology.

There are two options to choose:

- 1 - With remote sensing
- 2 - With low output voltage alarm

For maximum regulation, the remote sensing terminals can be connected to the load. This will allow a power cable voltage drop of up to 0.3 V on each cable to be offset.

The device is protected against overload and short-circuits by means of a current limiting circuit.

The device is also protected against reverse polarity input voltage, and the input fuse blows if an improper connection is made.

When a converter input undervoltage condition occurs, the converter is disabled, thus preventing the battery from becoming totally discharged.

INSTALACIÓN

Existen tres opciones de conexionado: conector DIN-41612-H15, regleta de FASTON y Regleta de terminales CLIP

El producto pueden instalarse de varias formas:

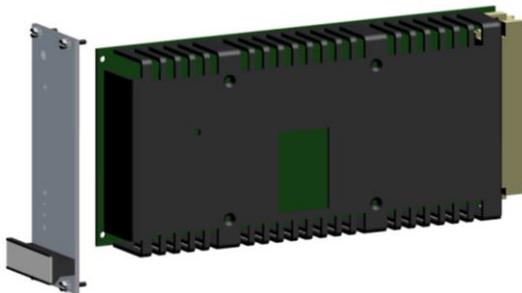

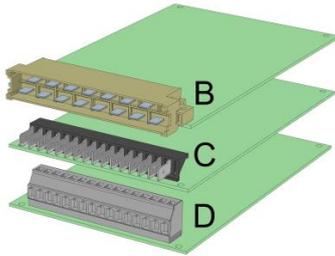

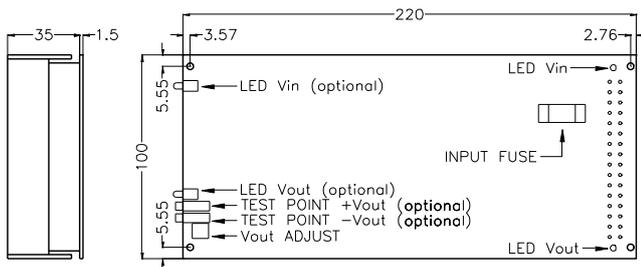

- Sobre un chasis mediante los 4 taladros de las esquinas
- En portacartas EUROCARD. Pare ello existe un accesorio con la referencia **NP-9155** que es frontal estándar de 9Te.
- Con la base referencia **NP-9125**. Ésta puede montarse sobre un chasis o en carril DIN añadiendo el accesorio clip **NP-9135**.

INSTALLATION

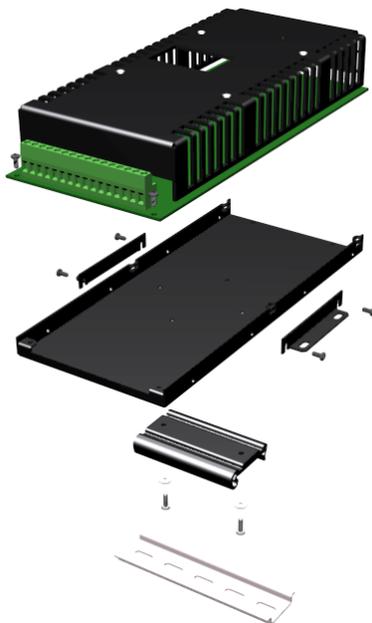

There are three connecting options: DIN-41612-H15 connector, FASTON block and spring clamp terminal strip.

The product can be mounted in several ways:

- On a chassis by means of the 4 corner holes.
- In EUROCARD racks. For this application there is a standard 9Te front plate accessory reference **NP-9155**
- With the base reference **NP-9125**. This accessory can be mounted on a chassis or in DIN rail adding the clip accessory **NP-9135**.

NP-9125

NP-9135

PUESTA EN MARCHA

Efectuar la conexión según la tabla. La utilización de la detección remota (sense) no es imprescindible, pero si se requiere hacerla es recomendable utilizar cable coaxial o bien un par trenzado.

PRECAUCIÓN: Si la carga se conecta a las tomas de detección remota (+/-S) faltando la conexión de la salida a dicha carga la función detección remota se puede inutilizar debido a la actuación del fusible interno de protección.

Si se requiere obtener potencias cercanas a la máxima es importante que el montaje favorezca la refrigeración por convención natural y la placa esté en posición vertical.

Si se desea conectar varios convertidores en paralelo deberá realizar lo siguiente:

- Ajustar la tensión de salida de todos los convertidores con una diferencia entre ellas lo menor posible..
- Unir las salidas en la carga utilizando cables de sección no mayor que la apropiada, y de igual longitud.
- No utilizar detección remota.

Por motivos de seguridad es necesario:

- Proporcionar al equipo una envolvente de protección conforme a las directivas de seguridad eléctrica del país donde sea instalado.
- Para sustituir el fusible hacerlo por otro del mismo calibre y tipo con el convertidor desconectado de la alimentación eléctrica.

START-UP

Perform connection as per the table. Use of remote sensing is not absolutely necessary, but if this is required, use of a co-axial or a twisted-pair cable is recommended.

WARNING: If the load is connected to the tabs of remote sensing (+/-S) and the connection from the output to this load is missing the remote sensing function could make unusable due to the acting of the internal fuse of protection.

If power levels close to the maximum output are required, make sure the assembly enhances cooling by natural convection and the card is placed in vertical position.

If several converters need to be connected in parallel, do the following:

Set the output voltage for all converters featuring a mutual difference as small as possible.

Join the load outputs by using cables with a cross-section no greater than the one required and of equal length.

Do not use remote sensing.

For safety reasons, the following requirements must be complied with:

Provide the equipment with some kind of protective enclosure that complies with the electrical safety directives in effect within the country where the equipment is installed.

Only replace the fuse with another fuse of the same rating and type, and only after disconnecting the converter from DC power.
