

**CARACTERÍSTICAS GENERALES:**

- Prestaciones ferroviarias EN50155 (\*)
- Tiempo de mantenimiento 10ms
- Inhibición remota
- Alto aislamiento entrada-salida
- Dimensiones estándar Eurocard 3U
- Tensión de salida ajustable
- Detección remota
- LED de entrada OK
- LED presencia de tensión de salida

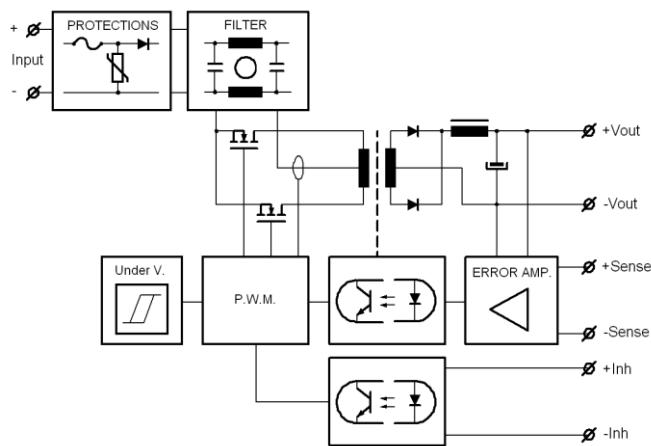

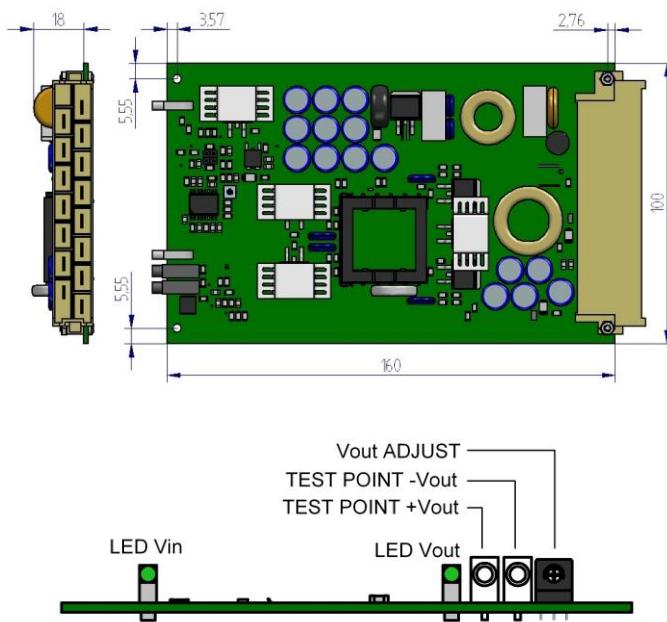

**GENERAL FEATURES:**

- Railway features according to EN50155 (\*)
- Hold up time 10ms
- Remote inhibit
- High input-output isolation
- Standard size Eurocard 3U
- Adjustable output voltage
- Remote sensing
- Input voltage OK LED
- Output voltage presence LED

**DESCRIPCIÓN**

La serie CCS-60 está formada por convertidores de corriente continua a corriente continua del tipo PWM (modulación de anchura de pulso), con aislamiento galvánico entre la entrada y la salida, comutando a frecuencia fija y empleando la topología de convertidor en contrafase.

La realimentación de tensión se efectúa transfiriendo la señal de error desde la salida a la parte primaria, a través de un optoacoplador, donde el circuito PWM modifica la anchura de los pulsos según sea necesario para mantener la tensión de salida estable.

Para disponer de la máxima regulación, pueden conectarse a la carga los terminales de detección remota. Esto permite compensar una caída en los cables de potencia hasta 0,3V en cada uno de ellos.

El aparato está protegido contra sobrecargas y cortocircuitos por un circuito limitador de corriente.

También está preparado para soportar una inversión de polaridad de tensión a la entrada, fundiendo el fusible de entrada en caso de conexión errónea.

En caso de subtensión en la entrada el convertidor se inhibe evitando la descarga total de la batería.

**DESCRIPTION**

The CCS-60 series consists of PWM DC-DC converters, with a galvanic isolation between input and output. The converters operate at a fixed switching frequency and use push-pull converter topology.

Voltage feedback is performed by transferring the error signal from the output to the primary side through an optocoupler, where the PWM circuit changes the pulse width as required to keep the voltage output stable.

For maximum regulation, the remote sensing terminals can be connected to the load. This will allow a power cable voltage drop of up to 0.3 V on each cable to be offset.

The device is protected against overload and short-circuit by means of a current limiting circuit.

The device is also protected against reverse polarity input voltage, and the input fuse blows if an improper connection is made.

When a converter input undervoltage condition occurs, the converter is disabled, thus preventing the battery from becoming totally discharged.

**PUESTA EN MARCHA**

Efectuar la conexión según la tabla. La utilización de la detección remota (sense) no es imprescindible, pero si se requiere hacerla es recomendable utilizar cable coaxial o bien un par trenzado.

**PRECAUCIÓN:** Si la carga se conecta a las tomas de detección remota (+/-S) faltando la conexión de la salida a dicha carga la función detección remota se puede inutilizar debido a la actuación del fusible interno de protección.

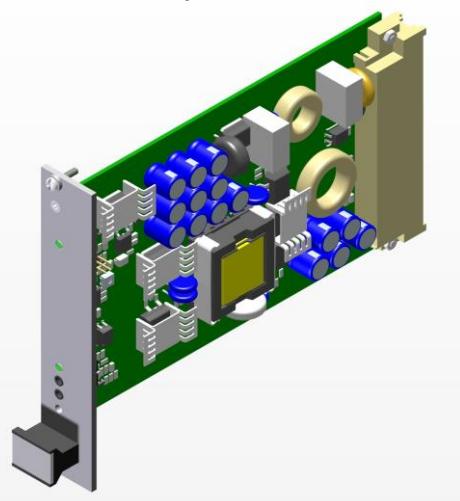

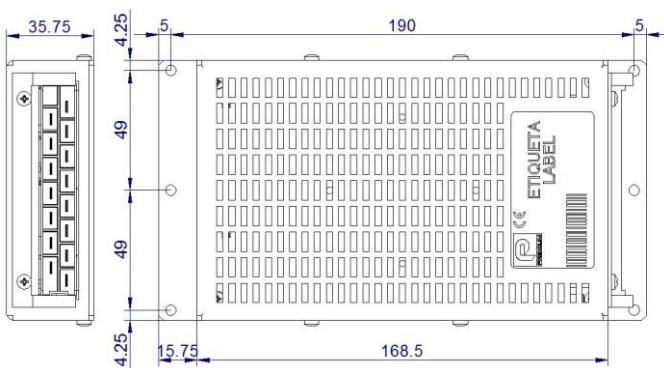

Si se requiere obtener potencias cercanas a la máxima es importante que el montaje favorezca la refrigeración por convención natural y la placa esté en posición vertical.

**Si se desea conectar varios convertidores en paralelo deberá realizar lo siguiente:**

- Ajustar la tensión de salida de todos los convertidores con una diferencia entre ellas lo menor posible.
- Unir las salidas en la carga utilizando cables de sección no mayor que la apropiada, y de igual longitud.
- No utilizar detección remota.

**Por motivos de seguridad es necesario:**

- Proporcionar al equipo una envolvente de protección conforme a las directivas de seguridad eléctrica del país donde sea instalado.
- Para sustituir el fusible hacerlo por otro del mismo calibre y tipo con el convertidor desconectado de la alimentación eléctrica.

**Front plate NP-9213**

**Case NP-9297**

**Connector 2601-379**

### START-UP

Perform connection as per the table. Use of remote sensing is not absolutely necessary, but if this is required, use of a co-axial or a twisted-pair cable is recommended.

**WARNING:** If the load is connected to the tabs of remote sensing (+/-S) and the connection from the output to this load is missing the remote sensing function could make unusable due to the acting of the internal fuse of protection.

If power levels close to the maximum output are required, make sure the assembly enhances cooling by natural convection and the card is placed in vertical position.

**If several converters need to be connected in parallel, do the following:**

- Set the output voltage for all converters featuring a mutual difference as small as possible.
- Join the load outputs by using cables with a cross-section no greater than the one required and of equal length.
- Do not use remote sensing.

**For safety reasons, the following requirements must be complied with:**

- Provide the equipment with some kind of protective enclosure that complies with the electrical safety directives in effect within the country where the equipment is installed.
- Only replace the fuse with another fuse of the same rating and type, and only after disconnecting the converter from DC power.

### INSTALACIÓN

Conexionado: a través de conector DIN-41612-H15.

El producto puede instalarse de varias formas:

- Sobre un chasis mediante 4 taladros
- En portacartas EUROCARD. Para ello existe un accesorio con la referencia NP-9213 que es un frontal estándar de 5Te.
- En la caja estándar IP30 código NP-9297

### INSTALLATION

Connection: DIN-41612-H15 connector

The product can be mounted in several ways:

- On a chassis by means of the 4 holes.
- In EUROCARD racks. For this application there is a standard 5Te front plate accessory reference NP-9213.
- In the standard case IP30 code NP-9297
